

Saving £Millions & Saving our Planet

9000 EnviroVent filterless extract fans installed across Fife

Specification

In August 2004 the decision was taken to specify the EnviroVent Filterless Extract Fan across the Fife Council's housing stock due to its innovative design, guaranteed performance and its many environmental benefits.

By July 2007, 9000 EnviroVent Filterless Extract Fans had been installed across the Fife Region

Maintenance

Since the specification has been agreed, Fife has not spent a penny in maintenance or repair apart from the initial cost.

Fife Council ongoing warranty:

Time Plan

2004-2007	No cost incurred
2007-2008	Still no cost incurred
2011-?	Central cartridges replaced and a new 5 year warranty issued

Saving £Millions and Saving our Planet

If any other extract fan had been installed, Fife could have expected to have paid in excess of £2million in replacement fan costs over a 25 year period. This would amount to 45,000 replacement extract fans, equivalent to 14 fully loaded 20 foot containers going to landfill sites.

As Fife intend to specify the EnviroVent Filterless Extract Fan for their remaining properties in the kitchens and bathrooms, over a 25 year period they will save a total amount of £14.6million and 330,170 replacement fans. Not only that, the carbon emissions that would be saved based on their total housing stock of 33,017 dwellings would be a staggering 43,506 tonnes over the 25 year lifecycle period.
