

# Working in Partnership and Providing Solutions

IMPROVING INDOOR WITHIN THE HOME GROUP SINCE 1989

**EnviroVent has been solving condensation and poor air quality problems for the Home Group, part of the GM Procure consortia, across the North East of England for nearly twenty years.**

The close working relationship began with the remedial repair work, after carrying out surveys on the properties suffering from condensation and mould problems. Up until now EnviroVent has installed 550 loft units under day-to-day remedial repair projects. As a result of the immediate benefits, which the EnviroVent Positive Ventilation Systems had on the indoor air quality, this soon led to the unit being specified on a further 1100 homes in accordance with planned maintenance programmes.

Large contracts include Arthur's Hill, Spennymoor and recently Sunderland where 250 units have been installed.

## GM Procure

Since 2006, following a rigorous evaluation process, EnviroVent has been awarded sole supplier status for ventilation products by GM Procure.

Fundamental to the selection was the life cycle costing and environmental benefits.

To date EnviroVent has installed 4240 Filterless Extract Fans, 1400 Loft Mounted Positive Ventilation Units and 300 wall-mounted units across the GM Procure Consortia.
